## **DETAILED ACTION**

### **Objection to Drawings**

Examiner withdraws objection to the drawings held under 37 CFR 1.84(p)(5) in view of Applicant's amended figures 1a and 1b (see pages 5-6 of Applicant remarks) addresses the objections by deleting reference numbers not mentioned in the specification and amending "1" to read as "10" in figure 6.

### **Rejection under 35 USC § 103**

Applicant's arguments, see pages 6-8, filed 11/22/2006, with respect to the rejection of 35 U.S.C. § 103(a) have been fully considered and are persuasive. The rejection of claims 1-4 has been withdrawn in view of Applicant's amendment to claim 1 that includes language that is consistent with the disclosure of invention, which allows for the embossed part to be formed on the peripheral surface of the nozzle and throughout the length of the nozzle. Although Applicant amends Claim 1 to overcome the prior art, Claim 1 still is indefinite and is rejected under 35 USC § 112 second paragraph (see below).

### ***Drawings***

Figure 1a and 1b should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid

abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the embossed parts formed on the outer and inner peripheral surfaces of the nozzle must be shown separately and together or the feature(s) must be canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1-12 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1 is vague and indefinite as it is unclear whether Applicant is claiming the subcombination or the combination. Examiner notes that the preamble of Claim 1 recites a “nozzle”, whereas the body of Claim 1 recites the combination of the “nozzle” and “heat sealable plastic bag”. Applicant should only claim the “nozzle” in the body of the claim or recite the combination in the preamble. Appropriate correction is required.

***Examiner's Comment***

Examiner is unclear as to how the nozzle, which is open to the atmosphere (See Figures 5 and 6) can create a reasonable vacuum inside the heat sealable bag. It appears that the outer peripheral openings are extended out of the bag and are constantly exposed. Examiner questions how the outer peripheral openings and embossed nozzle end opening are sealed from direct atmospheric communication.
